

07/01/19, Press Release:

### Inflow & Infiltration: Solving the Age Old Problem of Broken & Missing Cleanout Caps

W.M. International, Inc. introduces the first Recessed Tamper Resistant (RTR) Cleanout Plug. The all stainless steel and EPDM rubber plug can be quickly set below grade with the RTR plug's proprietary stainless steel installation "Key". Installation or removal only takes a few seconds with the aid of a power hand drill. Weather resistant polyester private plug labeling is available. Labeling can show the Jurisdiction's logo, illicit discharge ordinance and emergency contact phone no. amongst other information.

See a short demonstration on how easy it is to install and remove the RTR Plug:

**Fig. 2. Power Tightening with Keyed Torx Bit**

Recently a highly respected I&I Consultant and EOR commented on the RTR Plug; "Absolutely think this is a great idea! I had not seen this but it is very simple and solves an age-old problem & major source of inflow."

Isn't it time your Jurisdiction once and for all solved the problem of Broken & Missing Cleanout Caps?
